

Type - Premium High Visibility Jacket | **Range** - High Visibility

PREMIUM HIGH VISIBILITY JACKET

Style: CL-S001

Fabric: 80% Polyester, 20% Cotton (280gsm, Twill)

High tenacity core spun polyester thread (60 tex)

The Premium High Visibility Jacket is water and stain-resistant and features side vents with a partially elasticated waist and articulated movement panels to ensure an easy fit and comfort. Core-spun polyester threads, known for their durability and resistance to abrasion, make this versatile garment highly durable. Combined with triple-stitched seams and reinforced bar-tack stitching on high-stress areas, it becomes the definitive jacket for quarry and aggregate workers. The core-spun polyester also offers a unique resistance against colour fading when exposed to sunlight or washing. The garment conforms to the latest version of EN20471 (High Visibility Warning Clothing) and a Railway Group Standard RIS-3279-TOM Hi-Vis orange, the latter suitable for those working on and around railway tracks.
